

Dear Valued Customer,

At Fluid Dynamics we take great pride in supporting American manufacturing by making a concerted effort to source domestic components for our hose assemblies. Our commitment to quality and supporting American industry is at the core of our business practices.

However, in some cases, sourcing certain components domestically at a competitive price is not feasible. In these instances, we work with trusted suppliers who may provide imported products while maintaining our high standards for quality and reliability.

As you may be aware, some imported components are subject to additional tariffs. When this occurs, we are left with no choice but to pass along these additional costs to our customers. We remain dedicated to providing transparency in our pricing and will continue to source domestically whenever possible to minimize these impacts.

We appreciate your continued trust in Fluid Dynamics and your support in our effort to prioritize quality components. We recognize that this is a developing situation and are monitoring it closely. As it evolves, our pricing structure will be adjusted accordingly. Should you have any questions or concerns, please do not hesitate to reach out.
